Production Engineer for a young innovative MedTech company

Production process, supply chain, cost optimizations and preparing for growth

TracInnovations are seeking a qualified, innovative Production Engineer to join our growing organization. You will be responsible for our Production and oversee and improve our assembly and related work processes. An engineering mindset, attention to details and the ability to optimize production processes for maximum efficiency are necessary skills for this role.

Production Engineer responsibilities

- Plan, manage and oversee all elements of our Production and product assembly
- Assess and analyze current production methods and develop improved and more efficient processes
- Initiate, design and implement cost reductive changes
- Implement quality control measures and inspections that effectively monitors incoming parts and the final products, ensuring high quality results
- Be an active part in designing our production room and facilities for production
- Own the supply chain and be responsible for purchasing and sourcing of materials
- Manage our inventory and make sure we have the necessary parts for assembly to support sale
- Other tasks include small development assignments in Inventor

Currently there are no employees in the Production function. Therefore, this job opening is a huge career opportunity and you will have an active role in designing the function as we grow.

Production Engineer qualifications

- You have a Master's degree in engineering, preferably Mechanical
- You are familiar with the Inventor software
- You easily use Microsoft Excel and other programs necessary to support a production engineering function
- You have at least 3+ years' experience from a similar position
- Excellent communication skills, both verbally and written in English (Danish is a plus)
- The ability to grow into a management position with good leadership understanding
- You possess an overview of things, yet with an orientation to details
- You are self-driven and work efficiently

Beside all this you are easy going and enjoy to be a team player. You have the will to make positive contributions and changes toward more efficient work processes.

What do we offer ?

A career opportunity in a startup company soon to enter a growth phase. You will have highly skilled and engaged colleagues and an informal tone. The results of your efforts will make a difference to the whole

organization, and you will play an important role in our growth journey. We consider our pioneer spirit combined with thoroughness and credibility as our recipe for success. TracInnovations are situated at World Trade Center, Ballerup, where we can utilize all the benefits of being part of a big office hotel: lunch, hairdresser, chiropractor, massage, fitness center and many more.

Job start: as soon as possible. We will invite candidates for interviews ongoing, so send your application now if you are interested.

Contact

If you wish to get more information on the position, please contact Agnes Friese Skov on cell phone +45 30 31 33 79.

How to apply

Send your cover letter and CV to afs@tracinnno.dk with the subject "Production Engineer".

We look forward to hearing from you.

TracInnovations (www.tracinnovations.com) is a MedTech spin out from the Technical University of Denmark, established in 2015. Our vision is to provide accurate and reliable motion tracking for the MRI and PET scanner environment. The company is currently raising money from new investors for the next development phase and we expect to have an FDA approved system in the summer 2021.
